

Discover the Many Ways NextDiesel[™] Works for You

Biofuel Industries Group, LLC is proud to introduce NextDiesel[™] ... an advanced, ASTM-certified commercial B100 biodiesel fuel produced in Michigan's largest facility, designed and built from the ground up to provide the product excellence and customer convenience you demand for your biodiesel needs.

Our 30,000 square foot facility is on a 25-acre site ideally located in Adrian, Michigan. The plant features an indoor heated area containing storage tanks for feedstock and the B100 NextDiesel[™] biodiesel and NextHeat home heating products. Other important features include:

- The latest highly-automated production technology for superior biodiesel product quality that can be maintained while using a wide range of feedstocks
- An on site state-of-the-art test lab to continually validate our high quality standards
- Sophisticated environmental and fire suppression systems
- Carefully chosen processing equipment that does not emit greenhouse gases and uses only recycled water during the production of NextDiesel[™]
- Access to three major railroads, with on site space for 15 rail cars with expansion capability to 50 rail cars on site.

We are fortunate to be located within a 25-acre Renewable Energy Renaissance Zone that provides incentives and opportunities for the development and production of additional environmentally friendly and cost-effective renewable energy products.

The NextDiesel[™] facility is highly efficient with a current production capacity of 20 million gallons per year. Our plan is to increase capacities very soon to meet the growing demand for renewable fuels. In fact, we are the first Michigan biodiesel manufacturing facility to certify as a designated Renewable Energy Renaissance Zone, helping Michigan to continue to develop as a leader in renewable energy technology and production.

We are proud to play a part in the exciting effort to create new jobs, markets and opportunities in Michigan and throughout the Midwest while at the same time, providing a first-class product that is also environmentally friendly.

Important Product Features

Outstanding Quality ... Sustainable Value

- NextDiesel™ biodiesel is a clean burning fuel made entirely from renewable and recyclable resources
- The subject of extensive research and testing, NextDiesel™ biodiesel, which consistently meets ASTM D6751 standards, is a sensible alternative fuel that is environmentally sound and offers a host of practical benefits for the consumer and the economy.

Customer Focused Objectives

- A commitment to working with fuel oil distributors who, in turn, are dedicated to the growth of our industry and provide exceptional customer service
- Railroad access provides convenient connections to Canadian National, CSX, Norfolk Southern and the Indiana and Ohio lines
- Operated by knowledgeable people who understand the product, the production process and the biodiesel industry.

Environmentally Aware

- Our focus as an organization is clear ... we will always strive to achieve an operation that is as friendly to the environment and the surrounding community as it is to our customers.

Community-Minded

- Our close association with the City of Adrian and Lenawee County where we produce NextDiesel™, grows out of their strong commitment to agriculture and renewable fuels.
